

Work kit

Offline installer for an Ubuntu x86_64 work laptop · Skryx-L-A

Ask your company's IT which modules and AI services are approved. The fetch needs network access and about 15 GB of storage.

Get the kit

```
git clone https://github.com/Skryx-L-A/work-kit ~/work-kit
```

Without Git, use GitHub's **Download ZIP** and unpack it to `~/work-kit`.

Fetch and install

```
bash ~/work-kit/setup/fetch-offline.sh
```

The fetch resumes interrupted downloads and checks SHA-256 hashes.

```
bash ~/work-kit/setup/install-kit.sh
```

The installer copies and checks the kit, then opens the module menu. Open a new terminal when it finishes.
